final Leio2 Def. (Similar matrin) If A and B are square matrices, then we say that B is similar to A if there is an invertible matrix & P such that $B = P^TAP$; where P is invertible matrix € me write B ~ A. NO: If B is similar to A, then A is also similar to B Is similar to a a diagonal matrix. Def. (Diagonalizable) A square matrin A is called diagonalizable if it is similar to some diagonal matrire. ie. I an invertible matrix P such that P'AP is diagonal. In this case, P is said to diagonalize A.

* Why do we want to find a diagonal mother achied is similar to any matrix A? => Because the matrin A & its similar diagonal matrin have same determinant, rank, mulliby, trace, characteristic ed, eary to find.
eigenvalues etc. for diagonal matrix, there are early to find. Joneg, if BNA, ie B= PAP, thun, $|B| = |P^TAP| = |P^T||A||P| = |D^T||A| \cdot |P| = |A|$ Enample (finding a matrix p that diagonalizes p is the matrix formed by taking the eigenvectors of A as columns 8. Find a matrix P that diagonalizer A = $\begin{pmatrix} 0 & 0 & -2 \\ 1 & 2 & 1 \\ 0 & 3 \end{pmatrix}$ Sol. charae-levistic eq. $\begin{pmatrix} 0 & 0 & -2 \\ 1 & 0 & 3 \end{pmatrix}$ Also, verify. 3-tn(A)A+ (A11+A22+A33) A-1A=0 theres to (A) = 0+2+3 =5
