I have had a really deep interest in photography since childhood. Whenever I was able to take a camera or mobile phone in my hand, I just jumped over it to take pictures. Those pictures were about anything I found photogenic to me. This interest has now become my hobby.

The word "photography," which comes from the Greek words "photo," which means light, and "graph," which means to draw, literally means "drawing with light." Taking a photograph is the process of capturing an image on a light-sensitive medium, such as film, or, in the case of digital photography, a digital electronic or magnetic memory.

The development of photography came about as a result of various technical advancements related to perceiving and capturing images. The camera obscura, or "dark room" in Latin, which produces an image of a scene, was first discovered in prehistoric China. In the fifth and fourth century BCE, the Greek mathematicians Aristotle and Euclid both independently described a camera obscura. Byzantine mathematician Anthemis of Trellis utilized a particular kind of camera obscura in his research in the sixth century CE.

I love taking pictures of people, objects, literally anything!
It fascinates me a lot that how amazing technology
photography is! Because it can make our memories more
remarkable.
Though I don't have enough time to input so
much time to my hobby of photography due to academic
pressure, I always try to take new pictures, try new angles,
new techniques more and more whenever I get time.

This photograph of my cousins was captured by myself , which reminds me of my own childhood, how I spent the golden period of my life.

Moreover, I also try to follow new trips and tricks about both mobile and camera photography to develop my skills.
Personally, I've never considered myself to be the creative type. But I've always had a passion for photography . It has really helped me to discover and develop a side of me I didn't know existed.

I am so much more vigilant and conscious of the amazing little things that surround me every day because of photography. I take note of elements that I may employ in my photographs, such as light, shadows, patterns, frames, and colors. More importantly, I pay attention to significant details like relationships, expressions, gestures, and feelings—in particular, the minute, everyday details that I want to remember. Even things I previously didn't truly adore, I now find enjoyable.

I always desire to go to the family hang outs since I enjoy taking pictures. I know that anything we do together, even something as simple as going on a walk or setting up a sprinkler in the backyard, will provide me with opportunities to practice and make wonderful memories.

With the pastime of photography, one can observe his/her development right away and improve swiftly. One can observe those changes if he/she places the images side by side from month to month. Those differences will be noticeable after a year. He/she'll not only be able to see how much they've improved, but also he/she'll also be inspired to keep clicking by viewing some of his/her favorites each month.

There are some famous [quotes](#) about photography, which encourages me more!

==> "For me, the camera is a sketchbook, an instrument of intuition and spontaneity."
    - Henri Cartier-Bresson.

==> "The painter constructs, the photographer discloses."
    - Susan Sontag.

This is something really interesting about photography, it can connect you with people. Furthermore, photos can give you various types of emotions just by staring at them ! Such as- joy, anger, grief, sympathy and so on !

Lastly, I just want to say, I really hope to pursue my hobby; photography in future with more efficient and developed skills.
